The Jobava London System (Rapport-Jobava System) - Complete Repertoire

Jobava London System - Introduction and Acknowledgement

Rapport-Jobava System

1. d4 d5 2. Nc3 Nf6 3. Bf4! *Welcome to my Chess Opening Course of the Rapport-Jobava London System! The Rapport-Jobava London System is a infallible opening which is moderately low and theory and quite easy to play. This Opening system is very flexible. Bf4 Nc3 Targets are on the queenside. This Opening System meets both aggressive and positional player's desire and objective. Either tamed or bewildered the choice is up to you! 3... Bf5 4. Nb5 Nb5 might sound elementary but either ways it actually part well! Why is that? What's the purpose behind the move Nb5? Doesn't that sound elementary? SGM Hikaru Nakamura once threw a tantrum and said this was garbage when Naroditsky successfully forked Hikaru due to premove. Funny enough Nb5 is actually a very good idea in the Rapport-Jobava London System. First it forces black to make this horrible move Na6!? The only saving move thus a misplaced knight! This messes up black's structure. It would take at least two tempos before black would be able to bring his knight into a better square! Nb3 forces black to do the uncanny. Keep that in your mind! [%cs! Rb5,Rc7][%cal Rb5c7,Rf4c7,Yb8a6,Ya6c7] (4. e3 continuum: This is my recommendation. White immediately prepares f3-g4-h4: 4... e6 5. f3 c5 6. g4 Bg6 7. h4 For example 7... h6 (7... h5 8. g5 Nfd7 9. Nb5) 8. Nb5) 4... Na6 An uncanny and crampy move. Would take at least two tempos before black could reroute his knight to a better place. Knight on the rim Nh6!? A forced defensive move! 5. a3 a3! To avoid complications since the position follows the same idea of the Rapport Jobava London System with black having to step forward with Nb4! After c6! Pawn to a3 is pretty much forced in here. 5... c6 The only good move is c6 in here. Everything else is too passive. Pawn to c6 of course threatens to take the knight thus forcing it to be evicted to the b5 square. (5... c5 c5 is another provocative move which doesn't really sound very well because this further opens up the dark squares around b8-f4. Position looks exploitable for white. Black needed to counter white's dark square bishop before committing to the move c5! 6. dxc5 Ne4 7. b4 White at ease was able to anchor the c5 pawn. White is up a piece whereas black gets little compensation for the pawn sacrifice. 7... g5 8. Be5 f6 9. Bc3) (5... e6 e6 strengthens the center and black is planning to counter white's dark square bishop with c6 thus kicking away the knight followed by Bd6! 6. e3 c6 7. Nc3 Bd6 8. Bxd6 Other ideas includes the move Bg3, but I prefer bishop takes bishop followed by f4! To strengthen white's control on the e5 square. 8... Qxd6 9. f4 0-0 10. Nf3 Nc7 11. Bd3) 6. Nc3 e6 Now black gets some sort of a Semi-Slav with the bishop on f5 and a knight on a rim a6 7. e3 Be7 8. Be2 0-0 9. g4 More of a provocative move I have to admit. White lashes out on the kingside with ideas of launching a pawn storm on the kingside. 9... Be4 10. f3 Bg6 11. h4 h5 12. Nh3 b5 13. 0-0 **

Horwitz, Anti, Standard Defence #1 - 1. d4 d5 2. Nc3 (c5) Nf6 3. Bf4 e6

Rapport-Jobava System

1. d4 d5 2. Nc3 Nf6 3. Bf4 This particular chapter is dedicated to the "One" and "Only" main line Horwitz Defence against the Jobava London. The Horwitz Defence can basically be played against everything. By everything I mean "Everything". It can be played against the Queen's Gambit, Catalan Opening, English Opening, London System, King's Indian Attack, and so on. Basically in here black's simple plan is to occupy the center, reinforce a hasty attack either on the center or the queenside depending on white's play. So on and so forth in the Jobava, the system remains very different. The idea of Bf4 Nd5 is one of the key factor why the Horwitz's auto piloted move order wouldn't fit very well. Remember the idea of Bf4 Nd5! huh? Black either have to play a6 or Na6 just to stop this. Thus a tempo ahead and a complicatedly matter on the queenside makes this position quite unbearable! 3... e6 This moved has been played most of the time. The standard Horwitz Defence against every system. Problem in here is that black allowed white to play Nb5! Which is the reason why black cannot go auto pilot against the Jobava London unless the Nb5 threat has been covered. (3... a6 4. e3 b5 Black expands with a few ideas of attacking chances. In particular the queenside. (4... c5!? Black challenges white's center. But in exchange white gets an extra tempo whereas black would get little compensation on the prized center. 5. dxc5 e6 (5... Qa5?! Unnecessary since moving your queen on the rim would only waste a tempo. Besides black has to make plans which piece will he use to recapture the c pawn. With the queen?! Loses two tempos. 6. Nf3 Qxc5 7. Qd3 Flexible position, white is free to castle on the queenside which in this case gives black attacking chances on the kingside. 7... Nbd7 8. 0-0-0) 6. Bd3! Favorable position, flexible and stable development. White should make plans when to castle. 6... Bxc5 7. Nf3 Nc6 8. 0-0 b5 White's objective is to open up the center with the move e4! 9. e4 0-0 10. a3) (4... Bf5 5. Nf3 e6 6. Be2 Be7 7. Ne5 The e5 square is often a good outpost. Keep that idea in mind would you? 7... 0-0 8. 0-0 Nc6 9. g4! With attacking chances on the kingside but not necessarily what you should do. Rapport-Jobava System

1. d4 d5 2. Nc3 Nf6 3. Bf4 c5 In this particular chapter we would be talking about the "Steinitz Countergambit" This effective Anti-London is known to quickly equalize or even have a better position against the London System. That is because after c5 all what white can do is react and defend consequently. After c5 Black would proceed with Qb6! White has to defend the b pawn or otherwise lose a piece. Despite of this, today's modern theory had successfully repealed and made amends to the Anti-London "Steinitz Countergambit" where white sacrifice a pawn for piece activity. But does this "Steinitz Countergambit" be an effective Anti-London against the Rapport-Jobava? We'll see... [%cal Gc3b5] 4. e3 The Anti-London "Steinitz Countergambit" wouldn't ever be an effective as it is against the London System. That is because the knight is on f3, with move such as Rb1 the b pawn is finally protected. Now black's queen end up being misplaced on b6 without anything better to do. 4... cxd4 Let's take a look at this wing c pawn takes center d pawn. Black has successfully take away one of white's center pawn against a wing pawn. Leaving black with a strong initiative with the d and e center pawns. But not to worry! White's aim is piece development. White is ahead of development and white's play would divert on the center. (4... Bg4 An energetic move which provokes white to either move the queen out or f3! Two choices in here, but f3 is the most strongest amongst the purist since this forces black's bishop to be evicted. 5. f3 Bd7 (5... Bh5?! Would be of no use since g4! Black would have wasted two tempos and white's devastating blow on the kingside would provoke black's kingside. 6. g4 Bg6 7. g5! White has a very strong initiative and attack on the kingside. Caro-Kann Defense: Exchange Variation, Rubinstein Variation

1. e4 Apologies if I started with the move e4. This was taken from my study "Unorthodox e4 Collection" And I have an extensive repertoire on playing against the Caro Kann. The Exchange Variation is one of them. However the theory pretty much remains the same after 1. d4 c6 2. e4! d5 (1. d4 c6 2. e4 After d4 and then c6 white could play e4 and everything would transpose into the old fashioned Caro Kann Defence. Just don't confuse this with e4 at first move. Play d4, if black plays c6 then play e4!) 1... c6 2. d4 e4! Effectively transposing into Caro Kann. Wait hold on why e4? Isn't this the Caro Kann and not the London System? What does this have to do with the London System? Wait hold up, before you have any doubts on this particular variation. We are going to settle for an Exchange Caro Kann followed by the improvised London System via Bd3 and c3! 2... d5 The Caro Kann Defence The Caro Kann Defence is the most solid opening choice against the move e4. King's Indian, Pirc, Grunfeld #1 - 1. d4 Nf6 2. Bf4 g6

Pirc Defense

1. d4 Nf6 Nf6 black wants to divert the game into a King's Indian or a Semi-Grunfeld structure. But in here after the move Nc3! Black would have to play d4 thus transposing back to the position we studied with the Horwitz Defence. Well other than that if black refuses and play g6!? Then simply e4! The move pawn to e4 was made possible because of the knight on c3. Black would have to play d5 or d6!? We'll get into that. 2. Nc3 White wants to play e4! Black has to play d5 or otherwise if let's say for example g6!? Aiming for a Grunfeld or King's Indian structure. Then simply e4! Then white is roughly doing better than black with his central advantage. 2... g6!? The move g6!? Allows the move e4! Giving white spacious and central advantage. [%cs! Ge4,Gf4][%cal Ge2e4,Gf2f4] 3. e4 Simply taking over the center. Was made possible because of the knight to c3 move order. 3... d6 There are two particular variations in which I recommend in here. The Austrian Attack or the "English" or "Yugoslavia" Attack structure. Everything heavily depends on your decision. 4. Be3! Be3! Is a very suitable and feasible system against the King's Indian or pirc with the Jobava London System. White is settling for the "English" or "Yugoslavia" structure where white castles queenside. Plays f3 followed by g4! and h4! A continuous attack on the devastated kingside! (4. f4 f4! The Austrian Attack. The Austrian attack is suitable for positional players who want to gain spacious advantage. White's attack would either divert on the center or kingside (Via Bird/Dutch Kingside Attack). 4... Bg7 5. Nf3 Bishop to e2 followed by short castle 0-0 should be enough and feasible for white's particular position. I do believe that white has the advantage in here because of the spacious advantage. 5... 0-0 6. Bd3 Two main moves, either Nc6 or even c5!? Both of which are included in here. For starters knight to c6 prevents black from making progress on the central breakthrough since the c5 pawn is blockaded. On the other hand c5 tempts white to exchange pieces and simplify. 6... Nbd7 Let's just say black doesn't really do anything aside from going forward with his usual King's Indian or Pirc structure and idea. That is the breakthroughs with c5 or Re8 e5! Well simply e5! White gains a favorable position with a spacious advantage. (6... Nc6!? White should play e4! With the help of the Nc6!? Move order black would have quite a problem with pawn breakthroughs in here. 7. e5 dxe5 8. fxe5 Nd7 9. Ne2 Nb4 10. Be4 f5 11. Bd3 Nxd3+ 12. Qxd3 c5 13. I've been through many positions such as the Advance Caro Kann, French, and even Pirc. I've gotten the spacious advantage but the problem is black's main objective shifted on the center. I've tried to hold onto it until it became my untimely downfall. So general rule would have been to "Give up the center if necessary". 7. dxc5 dxc5 8. e5 Wherever the knight goes. Be3 c5 9. 0-0 As a general advice "Give up the center of necessary" White has to give up the center or otherwise have some dents and iniquities on the center. King's Indian. Pirc, Grunfeld #4 - 1. d4 Nf6 2. Bf4 g6

Indian Defense

1. d4 Nf6 2. Nc3 g6 (2... d5 The only way the Grunfeld is possibly employable in here is if white goes with the Horwitz move order with d5 before jumping to the conclusion with Bg7?! Followed by d5?! 3. Bf4 g6 4. Nb5! The threat of fork between the king and rook can only be stopped by Na6. This horribly looking move makes the knight dislodged from the game. Dutch Defence

1. d4 f5 The Dutch Defence is a chess opening characterised by the moves: 1. d4 f5 Black's 1...f5 stakes a claim to the e4-square and envisions an attack in the middlegame on White's kingside; however, it also weakens Black's kingside to an extent. 2. f3!? My idea against the Dutch Defence is quite a bit unorthodox but playable. I've played this myself with success. The move pawn to f3!? fights for the e4 square. White can also open up the position with e4! But this would become complicated and to sum it all up, it offers a lot of risk. I suggest developing all of your pieces first before attacking the center with e4. 2... Nf6 3. Nc3 d5 [%csl Rd5,Re4,Ye5,Rf5][%cal Yd4e5,Rf5e4,Rd5e4] (3... e6 4. Be3! (7... d5 Stonewall Dutch The Stonewall Dutch is a setup where Black creates pawn "teeth" in the center on the light squares f5, e6, d5, and c6. This gives Black a great amount of space and control of e4, at the expense of a certain weakness of the dark-squares. Pros: Black does not lack space. Control of e4 might lead to a kingside attack. 8. e3 a6 9. Nge2 b5 10. Kb1 It would be nice if white was able to centralize his knight via Nf4 and Nd3! *I'm guessing that you already know what to do in here. 4. Nb5! Nb5 might sound elementary but either ways it actually part well! Why is that? What's the purpose behind the move Nb5? Doesn't that sound elementary? SGM Hikaru Nakamura once threw a tantrum and said this was garbagr when Naroditsky successfully forked Hikaru due to premove. Funny enough Nb5 is actually a very good idea in the Rapport-Jobava London System. First it forces black to make this horrible move Na6!? The only saving move thus a misplaced knight! This messes up black's structure. It would take at least two tempos before black would be able to bring his knight into a better square! Nb3 forces black to do the uncanny. Keep that in your mind! 4... Na6 5. e3 c6 6. Nc3 Don't worry about losing a tempo! Black's knight is literally on the rim! Would take a lot of time to organize his knight! **

Queen's Pawn Game

1. d4 c6 2. Nc3 d5 3. f3!? *e4 is straight up possible in here but that would eventually transpose into the "Classical Caro Kann". In the Classical Caro Kann white would get a slight edge but position would have been opened and would give black a quite flexible position. Instead of transposing into the Classical Caro Kann let's go for f3!? In the move pawn to f3 at least white would be able to recapture with the f pawn thus having a powerful center. A semi opened f file, and of course white gets a easy and flexible play with chances of attacking black's kingside. 3... e6 4. e4 With the knight and the f pawn supporting the e pawn thrust. Bf4 Nf6 3. e3 c5 *In this particular chapter we would be talking about the "Steinitz Countergambit" This effective Anti-London is known to quickly equalize or even have a better position against the London System. That is because after c5 all what white can do is react and defend consequently. After c5 Black would proceed with Qb6! White has to defend the b pawn or otherwise lose a piece. Despite of this, today's modern theory had successfully repealed and made amends to the Anti-London "Steinitz Countergambit" where white sacrifice a pawn for piece activity. Rapport-Jobava System

1. d4 Nf6 2. Nc3 d5 This particular chapter is dedicated to the "One" and "Only" main line Horwitz Defence against the Jobava London. The Horwitz Defence can basically be played against everything. By everything I mean "Everything". It can be played against the Queen's Gambit, Catalan Opening, English Opening, London System, King's Indian Attack, and so on. Basically in here black's simple plan is to occupy the center, reinforce a hasty attack either on the center or the queenside depending on white's play. So on and so forth in the Jobava, the system remains very different. The idea of Bf4 Nd5 is one of the key factor why the Horwitz's auto piloted move order wouldn't fit very well. Remember the idea of Bf4 Nd5! huh? Black either have to play a6 or Na6 just to stop this. Thus a tempo ahead and a complicatedly matter on the queenside makes this position quite unbearable! 3. Bf4 D01 Rapport-Jobava System D01 Rapport-Jobava System In this particular chapter we are going to talk about the one and only "Bf5" Symmetrical Jobava London. "Black is following the same basic objective of the Rapport-Jobava. But in this scenario Black may have some ideas with putting off the light square bishop behind the pawn pyramid. e6-d5. Jobava London System - Introduction and Acknowledgement

Rapport-Jobava System

1. d4 d5 2. Nc3 Nf6 3. Bf4! Welcome to my Chess Opening Course of the Rapport-Jobava London System! The Rapport-Jobava London System is a infallible opening which is moderately low and theory and quite easy to play. This Opening system is very flexible. Bf4 Nc3 Targets are on the queenside. This Opening System meets both aggressive and positional player's desire and objective. Either tamed or bewildered the choice is up to you! 3... Bf5 4. Nb5 Nb5 might sound elementary but either ways it actually part well! Why is that? What's the purpose behind the move Nb5? Doesn't that sound elementary? SGM Hikaru Nakamura once threw a tantrum and said this was garbage when Naroditsky successfully forked Hikaru due to premove. Funny enough Nb5 is actually a very good idea in the Rapport-Jobava London System. First it forces black to make this horrible move Na6!? The only saving move thus a misplaced knight! This messes up black's structure. It would take at least two tempos before black would be able to bring his knight into a better square! Nb3 forces black to do the uncanny. Keep that in your mind! [%csl Rb5,Rc7][%cal Rb5c7,Rf4c7,Yb8a6,Ya6c7] (4. e3 continuum: This is my recommendation. White immediately prepares f3-g4-h4: 4... e6 5. f3 c5 6. g4 Bg6 7. h4 For example 7... h6 (7... h5 8. g5 Nfd7 9. Nb5) 8. Nb5) 4... Na6 An uncanny and crampy move. Would take at least two tempos before black could reroute his knight to a better place. Knight on the rim Nh6!? A forced defensive move! 5. a3 a3! To avoid complications since the position follows the same idea of the Rapport Jobava London System with black having to step forward with Nb4! After c6! Pawn to a3 is pretty much forced in here. 5... c6 The only good move is c6 in here. Everything else is too passive. Pawn to c6 of course threatens to take the knight thus forcing it to be evicted to the b5 square. (5... c5 c5 is another provocative move which doesn't really sound very well because this further opens up the dark squares around b8-f4. Position looks exploitable for white. Black needed to counter white's dark square bishop before committing to the move c5! 6. dxc5 Ne4 7. b4 White at ease was able to anchor the c5 pawn. White is up a piece whereas black gets little compensation for the pawn sacrifice. 7... g5 8. Be5 f6 9. Bc3) (5... e6 e6 strengthens the center and black is planning to counter white's dark square bishop with c6 thus kicking away the knight followed by Bd6! 6. e3 c6 7. Nc3 Bd6 8. Bxd6 Other ideas includes the move Bg3, but I prefer bishop takes bishop followed by f4! To strengthen white's control on the e5 square. 8... Qxd6 9. f4 0-0 10. Nf3 Nc7 11. Bd3) 6. Nc3 e6 Now black gets some sort of a Semi-Slav with the bishop on f5 and a knight on a rim a6 7. e3 Be7 8. Be2 0-0 9. g4 More of a provocative move I have to admit. White lashes out on the kingside with ideas of launching a pawn storm on the kingside. 9... Be4 10. f3 Bg6 11. h4 h5 12. Nh3 b5 13. 0-0 *

Horwitz, Anti, Standard Defence #1 - 1. d4 d5 2. Nc3 (c5) Nf6 3. Bf4 e6

Rapport-Jobava System

1. d4 d5 2. Nc3 Nf6 3. Bf4 This particular chapter is dedicated to the "One" and "Only" main line Horwitz Defence against the Jobava London. The Horwitz Defence can basically be played against everything. By everything I mean "Everything". It can be played against the Queen's Gambit, Catalan Opening, English Opening, London System, King's Indian Attack, and so on. Basically in here black's simple plan is to occupy the center, reinforce a hasty attack either on the center or the queenside depending on white's play. So on and so forth in the Jobava, the system remains very different. The idea of Bf4 Nd5 is one of the key factor why the Horwitz's auto piloted move order wouldn't fit very well. Remember the idea of Bf4 Nd5! huh? Black either have to play a6 or Na6 just to stop this. Thus a tempo ahead and a complicatedly matter on the queenside makes this position quite unbearable! 3... e6 This moved has been played most of the time. The standard Horwitz Defence against every system. Problem in here is that black allowed white to play Nb5! Which is the reason why black cannot go auto pilot against the Jobava London unless the Nb5 threat has been covered. (3... a6 4. e3 b5 Black expands with a few ideas of attacking chances. In particular the queenside. (4... c5!? Black challenges white's center. But in exchange white gets an extra tempo whereas black would get little compensation on the prized center. 5. dxc5 e6 (5... Qa5?! Unnecessary since moving your queen on the rim would only waste a tempo. Besides black has to make plans which piece will he use to recapture the c pawn. With the queen?! Loses two tempos. 6. Nf3 Qxc5 7. Qd3 Flexible position, white is free to castle on the queenside which in this case gives black attacking chances on the kingside. 7... Nbd7 8. 0-0-0) 6. Bd3! Favorable position, flexible and stable development. White should make plans when to castle. 6... Bxc5 7. Nf3 Nc6 8. 0-0 b5 White's objective is to open up the center with the move e4! 9. e4 0-0 10. a3) (4... Bf5 5. Nf3 e6 6. Be2 Be7 7. Ne5 The e5 square is often a good outpost. Keep that idea in mind would you? 7... 0-0 8. 0-0 Nc6 9. g4! With attacking chances on the kingside but not necessarily what you should do. You can leave the position before g4 and stick with your plans and objectives.) 5. Bd3 Favorable position, flexible and stable development. White should make plans when to castle. 5... e6 6. Nce2 c5 7. c3 Nbd7 8. Nf3 Be7 9. 0-0 0-0 10. h3) (3... g6 Some sort of a Semi-Grünfeld. White should just continue with his standard set up. But aside from that everything is working well from here. 4. e3 Bg7 5. Nb5 Na6 6. Nf3 c6 7. Nc3 Qb6 8. Rb1 Bg4 9. Be2 0-0 10. 0-0) 4. Nb5! The threat of fork between the king and rook can only be stopped by Na6. This horribly looking move makes the knight dislodged from the game. It is misplaced, stuck on the rim and has to spend two tempos just to reinforce the knight into a better square. [%cal Rb8a6,Rb5c7] 4... Na6 (4... Bd6?! Another alternative which doesn't require the move Na6 to defend. This may seem like a good option since this also strengthens black's center in the future. But either ways you can't sleep too much on a sleep over! The problem behind this is that after knight takes bishop. White would have the bishop pair. 5. Nxd6+ cxd6 6. e3 Nc6 7. Nf3 0-0 8. h3 Re8 9. c3 e5 10. Bh2 Despite of black's effort in breaking up the center. There's really not much to be done in here for black since white's center is well fortified.) (4... Rapport-Jobava System

1. d4 d5 2. Nc3 Nf6 3. Bf4 c5 In this particular chapter we would be talking about the "Steinitz Countergambit" This effective Anti-London is known to quickly equalize or even have a better position against the London System. That is because after c5 all what white can do is react and defend consequently. After c5 Black would proceed with Qb6! White has to defend the b pawn or otherwise lose a piece. Despite of this, today's modern theory had successfully repealed and made amends to the Anti-London "Steinitz Countergambit" where white sacrifice a pawn for piece activity. But does this "Steinitz Countergambit" be an effective Anti-London against the Rapport-Jobava? We'll see... [%cal Gc3b5] 4. e3 The Anti-London "Steinitz Countergambit" wouldn't ever be an effective as it is against the London System. That is because the knight is on f3, with move such as Rb1 the b pawn is finally protected. Now black's queen end up being misplaced on b6 without anything better to do. 4... cxd4 Let's take a look at this wing c pawn takes center d pawn. Black has successfully take away one of white's center pawn against a wing pawn. Leaving black with a strong initiative with the d and e center pawns. But not to worry! White's aim is piece development. White is ahead of development and white's play would divert on the center. (4... Bg4 An energetic move which provokes white to either move the queen out or f3! Two choices in here, but f3 is the most strongest amongst the purist since this forces black's bishop to be evicted. 5. f3 Bd7 (5... Bh5?! Would be of no use since g4! Black would have wasted two tempos and white's devastating blow on the kingside would provoke black's kingside. 6. g4 Bg6 7. g5! White has a very strong initiative and attack on the kingside. Black would have a difficult time handling white's initiative on the kingside since white's attack has been fueled by black's own tempos. 7... Nh5 (7... cxd4 8. Nb5 Qa5+ 9. c3 dxc3 10. Nc7+) 8. Bxb8!! Please, never EVER do this without any tactical justification. Bishop takes knight forces black to take with the queen this losing the central d pawn. Otherwise if rook takes bishop then Bb4+! Black is obligated to sacrifice a queen for it is the only option to continue the game. 8... Qxb8 (8... Rxb8 9. Bb5+ Qd7 10. Bxd7+) 9. Bb5+ Kd8 10. Nxd5 White is already up a piece thus winning. Black's pieces are a laughingstock. With no Incentive or initiative of the pawn sacrifice and delayed development. Might as well as just resign in here.) 6. Qd2! Qd2! With clear intention of castling queenside. White's play would divert on the kingside. With the help of the f3 pawn g4 h4 would come in blitz maneuver. 6... Nc6 7. 0-0-0 e6 8. g4! "Attack Attack Attack Attack!" Push em baby yeah? Don't forget h4 soon. Would have been a great idea to play later on. 8... Be7 9. Nge2 0-0 10. h4) (4... e6?! Pretty much straightforward. Black wants to avoid complication and settled for e6?! to protect the c pawn. Why is this inaccurate you might ask? Well Nb5 and black is forced to give in with Na6. A knight on a rim. Misplaced and horrible. Wouldn't want that would you? 5. Nb5 Na6 Na6 the only good move to stop the threat of knight on c2+ with a fork. Na6 although force is an unfeasible and ugly move since the knight is on the rim and it is misplaced! Would take two tempos just to straighten it up. (5... Qa5+?? b4! Black is forced to take with a check! Nc2 is inevitable in here. Black's queen is forced to take the pawn. After queen takes pawn with a check c3! Thus black cannot stop the idea of fork. The fork with the king and rook with the knight cannot be stopped. 6. b4 Black is forced to take the knight thus losing a tempo and the fork on c2 with the knight cannot be stopped 6... Qxb4+ 7. c3 Qb2 8. Rb1 Qxa2 9. Nc7+) 6. c3 Pyramid pawn structure as always seen in the London, Colle System or even the Slav Defence. White has a powerful center in here. 6... Na3 Na3 just to shift away the knight from being taken by black's light square bishop thus creating a double b pawn. Although the pressure on the queenside would give white some attacking changes... I'm afraid the double b pawn creates more of a problem and risk since it would be hard to defend or anchor it. 8... Be7 9. Be2 0-0 10. Nf3 Nc7 11. 0-0) (4... Nc6 5. Nb5 Qa5+ 6. c3 e5 7. 1. d4 c6 *This is the Slav Defence. The Slav Defence is known for it's dynamic and positional play. Caro-Kann Defense: Exchange Variation, Rubinstein Variation

1. e4 Apologies if I started with the move e4. This was taken from my study "Unorthodox e4 Collection" And I have an extensive repertoire on playing against the Caro Kann. The Exchange Variation is one of them. However the theory pretty much remains the same after 1. d4 c6 2. e4! d5 (1. d4 c6 2. e4 After d4 and then c6 white could play e4 and everything would transpose into the old fashioned Caro Kann Defence. Just don't confuse this with e4 at first move. Play d4, if black plays c6 then play e4!) 1... c6 2. d4 e4! Effectively transposing into Caro Kann. Wait hold on why e4? Isn't this the Caro Kann and not the London System? What does this have to do with the London System? Wait hold up, before you have any doubts on this particular variation. We are going to settle for an Exchange Caro Kann followed by the improvised London System via Bd3 and c3! 2... d5 The Caro Kann Defence The Caro Kann Defence is the most solid opening choice against the move e4. The Caro Kann Defence starts with the move e4 c6 d4 d5! The Caro Kann is favoured amongst Chess legends such as Smyslov, Karpov, Botvinnik, Tal, and even Magnus Carlsen! 3. exd5 cxd5 4. Bd3 The Exchanged Caro Kann is the simplest and easiest way to handle the Caro Kann Defence. White is settling for a Rubinstein structure or the Improved London System. The move pawn to e4 was made possible because of the knight on c3. Black would have to play d5 or d6!? We'll get into that. 2. Nc3 White wants to play e4! Black has to play d5 or otherwise if let's say for example g6!? Aiming for a Grunfeld or King's Indian structure. Then simply e4! Then white is roughly doing better than black with his central advantage. 2... g6!? The move g6!? Allows the move e4! Giving white spacious and central advantage. [%cs! Ge4,Gf4][%cal Ge2e4,Gf2f4] 3. e4 Simply taking over the center. Was made possible because of the knight to c3 move order. 3... d6 There are two particular variations in which I recommend in here. The Austrian Attack or the "English" or "Yugoslavia" Attack structure. Everything heavily depends on your decision. 4. Be3! Be3! Is a very suitable and feasible system against the King's Indian or pirc with the Jobava London System. White is settling for the "English" or "Yugoslavia" structure where white castles queenside. Plays f3 followed by g4! and h4! A continuous attack on the devastated kingside! (4. f4 f4! The Austrian Attack. The Austrian attack is suitable for positional players who want to gain spacious advantage. White's attack would either divert on the center or kingside (Via Bird/Dutch Kingside Attack). 4... Bg7 5. Nf3 Bishop to e2 followed by short castle 0-0 should be enough and feasible for white's particular position. I do believe that white has the advantage in here because of the spacious advantage. 5... 0-0 6. Bd3 Two main moves, either Nc6 or even c5!? Both of which are included in here. For starters knight to c6 prevents black from making progress on the central breakthrough since the c5 pawn is blockaded. On the other hand c5 tempts white to exchange pieces and simplify. 6... Nbd7 Let's just say black doesn't really do anything aside from going forward with his usual King's Indian or Pirc structure and idea. That is the breakthroughs with c5 or Re8 e5! Well simply e5! White gains a favorable position with a spacious advantage. (6... Nc6!? White should play e4! With the help of the Nc6!? I've been through many positions such as the Advance Caro Kann, French, and even Pirc. I've gotten the spacious advantage but the problem is black's main objective shifted on the center. I've tried to hold onto it until it became my untimely downfall. So general rule would have been to "Give up the center if necessary". 7. dxc5 dxc5 8. e5 Wherever the knight goes. Benoni Defense: Benoni-Indian Defense

1. d4 c5 This is the Old Benoni Defence. The old Benoni Defence's main objective is of course to try and disrupt white's center thus the main objective of white is to either respond with passive maneuvers or extend the pawn to the fifth-rank. Bf4 c5 Nf6 + c5 = Benoni Okay here you have two main options as white: e3/c3 (you are ready to accept a draw) or d5 (you play for a win). Dutch Defence

1. d4 f5 The Dutch Defence is a chess opening characterised by the moves: 1. d4 f5 Black's 1...f5 stakes a claim to the e4-square and envisions an attack in the middlegame on White's kingside; however, it also weakens Black's kingside to an extent. 2. f3!? My idea against the Dutch Defence is quite a bit unorthodox but playable. I've played this myself with success. The move pawn to f3!? fights for the e4 square. White can also open up the position with e4! But this would become complicated and to sum it all up, it offers a lot of risk. I suggest developing all of your pieces first before attacking the center with e4. 2... Nf6 3. Nc3 d5 [%csl Rd5,Re4,Ye5,Rf5][%cal Yd4e5,Rf5e4,Rd5e4] (3... e6 4. Be3! Control of e4 might lead to a kingside attack. 8. e3 a6 9. Nge2 b5 10. Kb1 It would be nice if white was able to centralize his knight via Nf4 and Nd3! Englund Gambit At Higher Depth #1 - 1 d4 e5

Englund Gambit

1. d4 e5 As part of my extensive London Buckingham course. I think that this particular gambit needs to be covered. I've faced this so many times and I have to admit I didn't really know the refutation into this and I didn't seem to care (Too lazy to study it.) As a result I've lost many games. I didn't want those things to happen aswell to you. So as I result I included the refutation to the Englund Gambit aswell! The Englund Gambit is a well recognized trap in which black sacrifices a pawn after the move d4 then e5! 1. d4 c6 2. Nc3 d5 3. f3!? *e4 is straight up possible in here but that would eventually transpose into the "Classical Caro Kann". In the Classical Caro Kann white would get a slight edge but position would have been opened and would give black a quite flexible position. Instead of transposing into the Classical Caro Kann let's go for f3!? In the move pawn to f3 at least white would be able to recapture with the f pawn thus having a powerful center. A semi opened f file, and of course white gets a easy and flexible play with chances of attacking black's kingside. 3... e6 4. e4 With the knight and the f pawn supporting the e pawn thrust. White would dominate on the center with an absolute advantage! 4... Nf6 5. Nh3! With ideas of placing the knight to f2 to protect the e4 thrust. 1. d4 <http://www.viewchess.com/cbreader/2014/6/26/Game127724859.html> 1... Nf6 2. Nc3 d5 3. Bf4 This London/Veresov hybrid will probably gain increased attention, as not only Jobava but other elite GMs have tried it the past several years, including Mamedyarov himself a couple of times, and especially Hikaru Nakamura (at least seven times!). 3... Bf5 4. f3 e6 5. g4 Bg6 6. h4 h6 7. e3 c5 Rare, but it had hitherto been successful in the earlier, non-GM trials. (7... a6 was tried by Ian Nepomniachtchi against Nakamura in round 9; that game eventually finished in a draw. "Nepo" also played it against Jobava in round 13 of the same event, but lost that game.) 8. h5 Oddly, this obvious move was a novelty. 8... Bh7 9. Nb5 Na6 10. c3 Be7 11. Bd3 Bxd3 12. Mamedyarov's king is inadequately guarded, but in his defense it took some brilliant play by Jobava to prove it! (16... Nc4 It might seem as if White's attack is falling apart, as Black is threatening White's minor pieces, and the kingside remains closed. If so, the appearance is deceiving, and Jobava shows that Black's status is desperate. (25... gxf4 26. Qg6+!! (26. Rdg1+ Kf8 27. Rg8+ is more than good enough, but Qg6+ is prettier and faster.) 26... Queen's Pawn Game: Accelerated London System

1. d4 *This was a game played by Hikaru Nakamura against Anish Giri. Both opposing sides played very well in the opening. Tremendous performance by both opposing sides until Anish made a huge blunder which eventually gave in the game. 1... d5 2. Bf4 Nf6 3. e3 c5 In this particular chapter we would be talking about the "Steinitz Countergambit" This effective Anti-London is known to quickly equalize or even have a better position against the London System. That is because after c5 all what white can do is react and defend consequently. After c5 Black would proceed with Qb6! White has to defend the b pawn or otherwise lose a piece. Despite of this, today's modern theory had successfully repealed and made amends to the Anti-London "Steinitz Countergambit" where white sacrifice a pawn for piece activity. But does this "Steinitz Countergambit" be an effective Anti-London against the Rapport-Jobava? We'll see... 4. Rapport-Jobava System

1. d4 Nf6 2. Nc3 d5 This particular chapter is dedicated to the "One" and "Only" main line Horwitz Defence against the Jobava London. The Horwitz Defence can basically be played against everything. By everything I mean "Everything". It can be played against the Queen's Gambit, Catalan Opening, English Opening, London System, King's Indian Attack, and so on. Basically in here black's simple plan is to occupy the center, reinforce a hasty attack either on the center or the queenside depending on white's play. So on and so forth in the Jobava, the system remains very different. The idea of Bf4 Nd5 is one of the key factor why the Horwitz's auto piloted move order wouldn't fit very well. Remember the idea of Bf4 Nd5! huh? Black either have to play a6 or Na6 just to stop this. Thus a tempo ahead and a complicatedly matter on the queenside makes this position quite unbearable! 3. Bf4 D01 Rapport-Jobava System D01 Rapport-Jobava System In this particular chapter we are going to talk about the one and only "Bf5" Symmetrical Jobava London. "Black is following the same basic objective of the Rapport-Jobava. But in this scenario Black may have some ideas with putting off the light square bishop behind the pawn pyramid. e6-d5.
